## Storyboards

My initial sketches for storyboarding my idea feature a sad individual in the middle of the night with nowhere to really turn to at that moment. He leaves a generic message in the chat room type thing, and positive responses pop up that make him feel better. After talking with Austin, I tried to make my storyboard a little more specific and obvious that it was other users responding to the initial post about being sad. It's hard to see in the picture, but the response posts say things like "It gets better!" and "Here's how I coped with xyz…" When I think of other functions I will storyboard and iterate those as well.
